

From 'hit and run' to STEM Nurturing - Intensified Program (SNIP)

Dr. YL Khong, Tech Dome Penang, Malaysia

Tech Dome Penang has realized since we started three years ago, many of the interactions we have with the community is on a “hit and run” basis. One disadvantage of how we carried out our activities in the past is we run activities that involves groups of student and that is our only touch point with them for a long while. We feel it is important for us to have a continual engagement to be effective in motivating them to be interested in STEM. We have recently shifted our focused of interactions with the students and schools on a sustained engagement model. This paper describes this model which we called STEM Nurturing - Intensified Program (SNIP).
