

Let's Talk Science

Allen Jaffran Bin Abdullah Angi, Oil & Gas Discovery Centre, Brunei Darussalam.

'Let's Talk Science' was created with a mix of an engaging science show, talk show and with a little bit of a game show, which encourages the crowd to be a part of an interactive & fun, try & fail experiment game experience.

The show encourages the crowd to test's their theories, knowledge & come with endless possibilities & ideas. The show is not limited to science topics only and can explore different themes or educational topics or story.

Teaching Approach:

1. The show invites the diverse crowd to share their stories, known knowledge, facts and even personal stories related to the theme.
2. The host will encourage the crowd to participate, mind – energizer (brainstorm) and test their opinions or ideas through the experiments & games in the show.
3. Experiments and games are designed to be interactive, fun & open ended.
4. Weather the experiments succeed or failed the show teaches the importance of learning through; knowledge sharing & experimentation.

Outcome /Objective:

1. Knowledge sharing & learning from each other as how it was once practiced among scientist & great educators before the age of technology (google search, siri & etc)
2. Strengthen their spirit of learning and discovering new ideas, theories and facts. This may spark their inner 'explorer' and fuel their desire to search and test more educational topics.
3. To show them that everyone can be a scientist, explorer, discoverer & a teacher for a day. The show is designed to have a feel of 'free to talk & express your ideas or knowledge' with the idea of no right and wrong.
