

## Thinking out of the box in STEM Learning

*Regina Ng Li Wen, KidsSTOP™, Science Centre, Singapore*

Young children learn STEM by constantly experiencing the world around them. It is only through the engagement of their senses, that they learn the concepts of STEM spontaneously and instinctively. For this reason, a child's interest in STEM can begin at a young age. Outreach programme at KidsSTOP™ is formed for this reason; to makes STEM learning more accessible and child-friendly to pre-school teachers and parents, and ultimately benefiting the young children.

***KidsSTOP™ Comes to You!*** is the outreach arm of KidsSTOP™. Started in 2017, ***KidsSTOP™ Comes to You!*** has gained much traction in the pre-school industry and has effectively reached out to many pre-school students. Using creative drama and larger-than-life sets and props, KidsSTOP™ outreach programme creates stimulating moments for children aged 4-6 years old to experience the wonders of STEM with their senses!

In this parallel session, you will learn more about the concept of ***KidsSTOP™ Comes to You!*** and how the outreach programme is centered around using creative drama as an effective tool to enhance the learning experience of STEM.
