

Facilitation of teacher professional development by a Regional STEM Hub – what we've learnt so far

Desley Pidgeon, Central Queensland University, Australia

The Central Queensland STEM Hub resulting from the needs of both the University and the community of Gladstone was established in 2017. The success of the community, Industry and Uni partnership has seen the purpose built STEM Hub. Sessions from the STEM Hub assist teachers, particularly those in rural and remote areas, to design and implement STEM activities at their schools. This talk will focus on what has been learnt and what has changed three years into the program. It will also look to the future of what facilitation of teacher professional development by the STEM Network will involve, based on learnings and research.
